

Continuous Glucose Monitors (CGMs)

Continuous Glucose Monitors (CGMs) read your blood sugar levels throughout the day, using a sensor attached to your arm or stomach. These are useful for members on insulin or those who need to watch their blood sugars throughout the day.

Traditional blood sugar monitors use a finger prick and can only provide readings when you take the test. CGMs usually only need to be changed every 1-2 weeks, depending on the model.

Ask your provider if a continuous glucose monitor is right for you.

These CGMs can be found at your local network pharmacy.
You pay \$0 for CGMs at local network pharmacies when you have a prescription.
No prior authorization is needed.
