

Mechanical Stretching Devices

UR Guidelines 015

Policy and Procedure

Department	Medical Management
Purpose	To establish medical necessity guidelines for mechanical stretching devices
Applicability	All LOB
Approved	
Approved	Anne-Laura Cook, MD, FACP, MHCM
Approver Title	Vice President, Clinical Services
Original Effective Date	1/1/15
Revision Date	12/19/23
Revision Number	2
Review Date	9/15/26
Regulatory Requirement	

Notice: All information herein is proprietary to and sole property of Triton Health Systems, L.L.C. This documentation is for internal use only and may not be re-produced, copied, and/or re-distributed to any persons outside the company without written permission of Triton Health Systems, L.L.C.

Policy:

This document applies to VIVA HEALTH, Inc., VIVA HEALTH Administration L.L.C. and Triton Health Systems, L.L.C. hereafter referred to as VIVA HEALTH.

Dynamic Splinting Devices:

VIVA HEALTH considers dynamic splinting devices for the knee, elbow, wrist, finger, or toe medically necessary durable medical equipment (DME) if either of the following two selection criteria is met:

1. As an adjunct to occupational or physical therapy in members with documented signs and symptoms of significant motion stiffness/loss in the sub-acute injury or post-operative period (i.e., at least 3 weeks after injury or surgery); *or*
2. For members who have a prior documented history of motion stiffness/loss in a joint, have had a surgery or procedure done to improve motion to that joint, and are in the acute post-operative period following a second or subsequent surgery or procedure

Note: Dynamic splinting systems include, but are not limited to, such products as Advance Dynamic ROM, Dynasplint, EMPI Advance, LMB Pro-glide, Pro-glide Dynamic ROM, SaeboFlex, SaeboReach, Stat-A-Dyne, and Ultraflex.

VIVA HEALTH considers the following uses of dynamic splinting experimental and investigational:

- Carpal tunnel syndrome
- Cerebral palsy
- Foot drop associated with neuromuscular diseases
- Hallux valgus
- Head and spinal cord injuries
- Improvement of outcomes following botulinum toxin injection for treatment of limb spasticity
- Injuries of the ankle, and shoulder
- Multiple sclerosis
- Muscular dystrophy
- Plantar fasciitis
- Rheumatoid arthritis
- Stroke
- Trismus
- The prophylactic use of dynamic splinting in the management of chronic contractures (no significant change in motion for a 4-month period) and joint stiffness due to joint trauma, fractures, burns, head and spinal cord injuries, rheumatoid arthritis, multiple sclerosis, muscular dystrophy or cerebral palsy because of insufficient evidence in the peer-reviewed literature. However, if surgery is being performed for a “chronic” condition, the use of a dynamic splinting system may be considered medically necessary if the member meets the selection criteria stated above;

- Patient-actuated serial stretch (PASS) devices (e.g., the ERMI Knee/Ankle flexionator, the ERMI Shoulder flexionator, the ERMI Elbow extensionator, the ERMI Knee extensionator, the ERMI MPJ extensionator, JAS EZ (ankle, elbow, finger, knee extension, knee flexion, pronation/ supination, shoulder, toe and wrist), and knee extension devices (e.g., the Elite Seat));
- Joint active systems (JAS) splints (e.g., JAS Elbow, JAS Shoulder, JAS Knee, JAS Wrist, and JAS Pronation-Supination);
- Use of the EZ Turnbuckle orthosis (JAS orthosis) after open reduction internal fixation (ORIF) for radial head fracture;
- Medi-Dyne Prostretch device;
- The Saebomas dynamic mobile arm support system, the Kinovo mechanical mobile arm support and similar devices.

CPT codes covered if selection criteria are met:

Information in the [brackets] below has been added for clarification purposes.

Code	Code Description
29126	Application of short arm splint (forearm to hand); dynamic [not covered for carpal tunnel syndrome]
29131	Application of finger splint; dynamic
29505	Application of long leg splint (thigh to ankle or toes)
29515	Application of short leg splint (calf to foot)

HCPCS codes covered if selection criteria are met:

Advance Dynamic ROM, Pro-hyphenglide dynamic ROM, Saeboreach, EZ Turnbuckle Orthosis-hyphenno specific code:

E1800	Dynamic adjustable elbow extension/flexion device, includes soft interface material
E1802	Dynamic adjustable forearm pronation/supination device, includes soft interface material [not covered for carpal tunnel syndrome]
E1805	Dynamic adjustable wrist extension/flexion device, includes soft interface material [not covered for carpal tunnel syndrome]
E1810	Dynamic adjustable knee extension/flexion device, includes soft interface material
E1815	Dynamic adjustable ankle extension/flexion device, includes soft interface material
E1825	Dynamic adjustable finger extension/flexion device, includes soft interface material
E1830	Dynamic adjustable toe extension/flexion device, includes soft interface material
E1831	Static progressive stretch toe device, extension and/or flexion, with or without range of motion adjustment, includes all components and accessories

CPT codes covered if selection criteria are met:

Information in the [brackets] below has been added for clarification purposes.

Code	Code Description
HCPSC codes not covered for indications listed in the CPB:	
<i>ERMI Knee/Ankle Flexionator, MPJ Extensionator, ERMI Elbow Extensionator , ERMI Shoulder Flexionator, ERMI Knee Extensionator, Saebomas, JAZ EZ, Medi-hyphenDyne Prostretch, Kinovo mechanical mobile arm support -hyphenno specific code</i>	
E1801	Static progressive stretch elbow device, extension and/or flexion, with or without range of motion adjustment, includes all components and accessories
E1806	Static progressive stretch wrist device, flexion and/or extension, with or without range of motion adjustment, includes all components and accessories
E1811	Static progressive stretch knee device, extension and/or flexion, with or without range of motion adjustment, includes all components and accessories
E1816	Static progressive stretch ankle device, flexion and/or extension, with or without range of motion adjustment, includes all components and accessories
E1818	Static progressive stretch forearm pronation/supination device, with or without range of motion adjustment, includes all components and accessories
E1821	Replacement soft interface material/cuffs for bi-hyphendirectional static progressive stretch device
E1840	Dynamic adjustable shoulder flexion/abduction/rotation device, includes soft interface material
E1841	Static progressive stretch shoulder device, with or without range of motion adjustment, includes all components and accessories
L3100	Hallus-hyphenvalgus night dynamic splint, prefabricated, off-hyphenthe-hyphenshelf
